

# IGVC-01

## Vision Communication Gateway

### Features

- Real time monitoring of the PV micro inverter system
- Plug (direct into AC outlet) and Play
- Power Line Communication – (Collects information via AC wiring)
- Coupled operation with broadband router for communication through internet
- Simplify monitoring and analysis of the PV micro inverter system performance
- Allows viewing of data on web browser

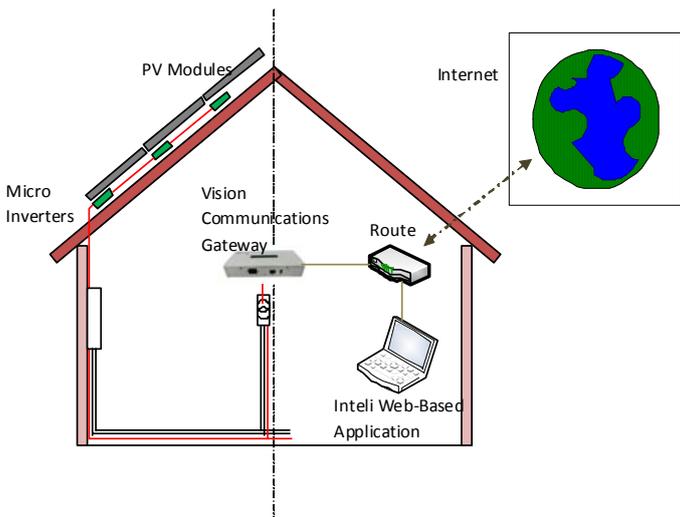

### Description

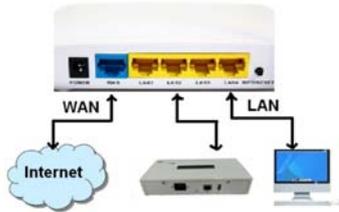

The InfluxGreen IGV-01 Vision communication gateway functions as a bridge between the PV micro inverter system and the Intel® web-based monitoring and management software system.

The Vision is an integral component of the InfluxGreen’s micro inverter system. It monitors the micro inverters that are connected to the PV modules.

The Vision retrieves the energy and performance data of the micro inverter over the AC powered lines, and report via internet to the Intel® management software system for computation and statistical analysis.

Combined with the advanced InfluxGreen PV micro inverters, the integrated system maximizes energy harvest and simplifies the overall design, installation and the management system.

## Technical Specifications

| AC Input          |                |
|-------------------|----------------|
| AC Outlet         | 100 to 240 VAC |
| Nominal Frequency | 50/60 Hz       |
| Power Consumption | 2W             |

| Connectivity                   |   |
|--------------------------------|---|
| Power line Communication (PLC) | Local Standards                         |
| Ethernet Cable                 | 10M/100M auto sensing, auto negotiation |

| Operating Environment |                        |
|-----------------------|------------------------|
| Operating Temperature | 0 to + 40 °C           |
| Storage Temperature   | -30 to + 50 °C         |
| Relative Humidity     | 0-80 %, non-condensing |
